ASSOCIATE PROJECT MANAGER

IT professional with over 7 years of experience in software engineering and project management. Proficient in leading and delivering diverse projects involving Blockchain, Generative AI, Data Analytics, and web and mobile application development. Adept at collaborating with local and international clients to drive innovative solutions and ensure project success.

CORE COMPETENCIES

- Project Management: Agile Methodologies, Team Leadership, Client Relations, Requirement Analysis
- Technical: Node.js, Solidity, Web3.js, Azure, MongoDB, SQL
- Industry Expertise: Blockchain Solutions, Data Analytics, Web and Mobile App Development

PROFESSIONAL EXPERIENCE

InnoBoon Technologies Private Limited: **May 2022 - Present**
Associate Project Manager

At Innoboon, I took on roles from developer to project manager, overseeing teams of up to 25 members on year-long projects. I contributed to development efforts using my Node.js expertise and worked closely with both domestic and international clients, successfully delivering major projects that met client expectations.

Accomplishments:

- Led cross-functional teams of up to 25 members on year-long projects, ensuring successful project completion and adherence to timelines.
- Successfully delivered major projects for international clients in Canada, the US, and Singapore, achieving high client satisfaction and repeat business.
- Built and maintained strong client relationships, aligning project outcomes with client expectations across domestic and international markets.
- Led teams across multiple proof-of-concepts (PoCs) and successfully converted these PoCs into full-scale projects.
- Upsold an existing product to a customer, securing an additional project and expanding the business relationship.
- Took over an in-progress project, introducing new development plans that accelerated timelines and ensured timely delivery.
- Played a key role in establishing the internal hierarchy and organisational structure, fostering clear reporting lines and efficient workflow.
- Actively involved in the organisation's hiring process, assisting in identifying and interviewing the right candidates to strengthen the team.
- Led resource allocation and collaborated on training and development plans, ensuring team members were prepared to meet project demands.
- Conducted daily scrum calls throughout the development phase, ensuring alignment and tracking progress across teams.
- Managed cross-functional teams, ensuring smooth collaboration and maintaining consistent project delivery

Senior Software Engineer

- Contributed directly to development tasks, utilising Node.js expertise to address critical project requirements and enhance technical outcomes.

CapTechIn: Mar 2021 - May 2022
Software Developer - Team Lead
Led the back-end development for the Redtie SMS Web Application, a platform enabling SMS services with NFT attachments, by building APIs to connect a React.js front-end with a Node.js backend. Additionally, served as team lead and blockchain developer for various Ethereum-based NFT projects (e.g., fitstage.io, mintedpaintings.com), where I helped set up a private blockchain and developed APIs using Web3.js for ERC-721 token integration.
Technologies: AWS Lambda, Plivo, Mailgun, Ethereum, Solidity, Web3.js

Accomplishments:
- Led teams in both product development and SaaS projects, ensuring seamless project execution and successful delivery.
- Quickly adapted to blockchain development, successfully restoring downed systems within a month and setting up a private Ethereum blockchain for development activities.
- Acted as a Business Analyst, Project Manager, and Developer for various NFT projects, maintaining clear communication with clients to understand their requirements and deliver effective solutions.
- Conducted daily scrum calls throughout the development phase, ensuring alignment and tracking progress across teams.
- Managed cross-functional teams, ensuring smooth collaboration and maintaining consistent project delivery.

Global Software Solutions Private Limited: Nov 2018 - Feb 2021
Software Engineer
Worked as a Software Engineer and Business Analyst on multiple projects, including a cloud-based enterprise application for law, healthcare, and finance, using Azure and Node.js. I helped develop a banking application with TORUS for clients in East Africa and UAE, focusing on cheque scanning and online transactions. Additionally, I worked on a document management system (DMS) for an insurance provider in Oman, helping streamline document and claim management with Angular and Node.js. My role involved backend development, client communication, and business analysis to deliver effective solutions.
- Technologies: Azure, Node.js, TORUS, Angular, MongoDB, Kubernetes, Minio, Azure DevOps.

Cognizant: Dec 2016 - Jul 2017
Associate
During my time at Cognizant as a Associate, I received comprehensive training in Microsoft SharePoint, where I gained hands-on experience with its features and functionalities. Additionally, I underwent corporate communication and business analysis training, which enhanced my skills in client interaction, requirement gathering, and solution delivery. This experience laid a strong foundation for my future roles in software development and business analysis.

EDUCATION AND CERTIFICATION

Natesan Institue of Cooperative Management - Higher Diploma in Cooperative Management **2018**

Karunya Institute Of Technology - B.Tech Computer Science and Engg **2016**

Cambridge University - BEC-Vantage Certification **2013**

Rosemary MHSS - HSC **2012**

St. Xavier's MHSS - SSLC **2010**
